Do more

EPDS is highly specialized software for the electronic parts

Empower your company to do more

Using the latest Microsoft technology, EPDS is an all-in-one enterprise solution.

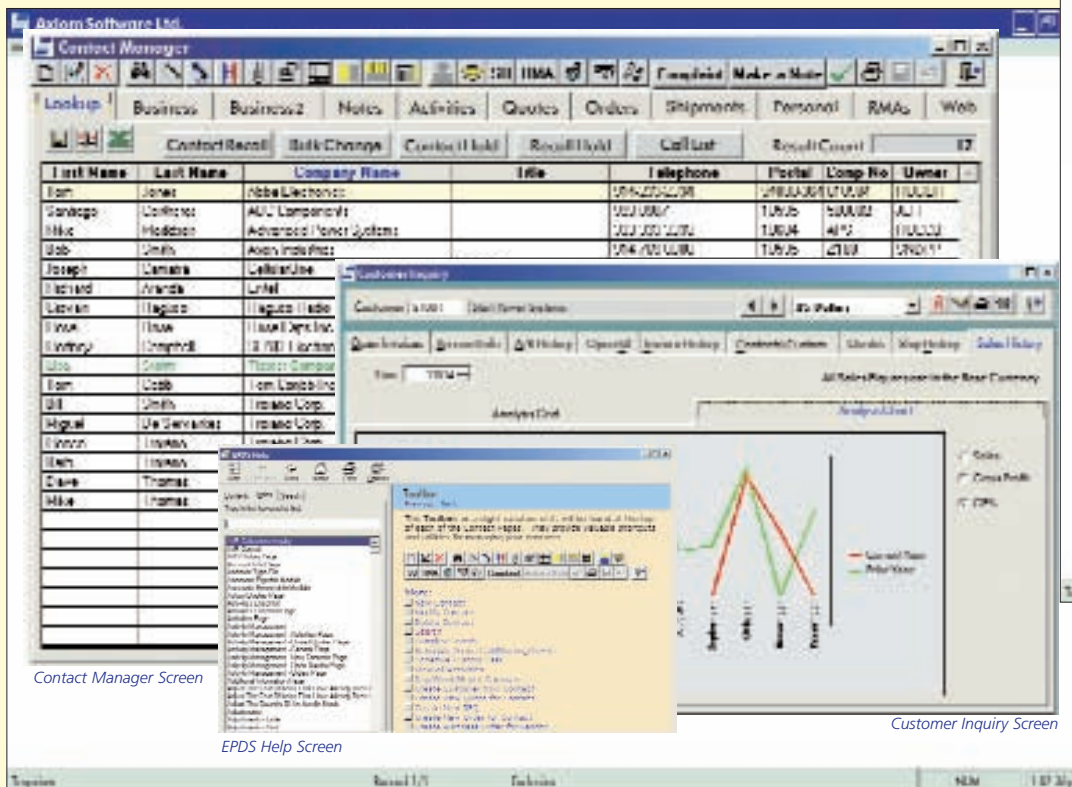

Where other business software may only provide part of the solution, EPDS integrates your front and back office seamlessly, from contact management to balancing your checkbook, thus providing a comprehensive, tightly integrated, enterprise solution. EPDS offers unique features that empower you and your people to do more...faster, easier and better.

EPDS records and saves every transaction in detail and automatically provides an audit trail of any changes made along the way. If someone modifies information, such as a customer's payment terms, EPDS keeps track of who did it and when it was done.

Within the Customer Inquiry screen you can see a complete picture of your customer from current and past due invoices to quotes, orders and shipments. You can instantly review contact information, sales information, collection comments, payment history, open orders, and more! EPDS enables you to easily drill down to the lowest level of detail.

Know more about your finances

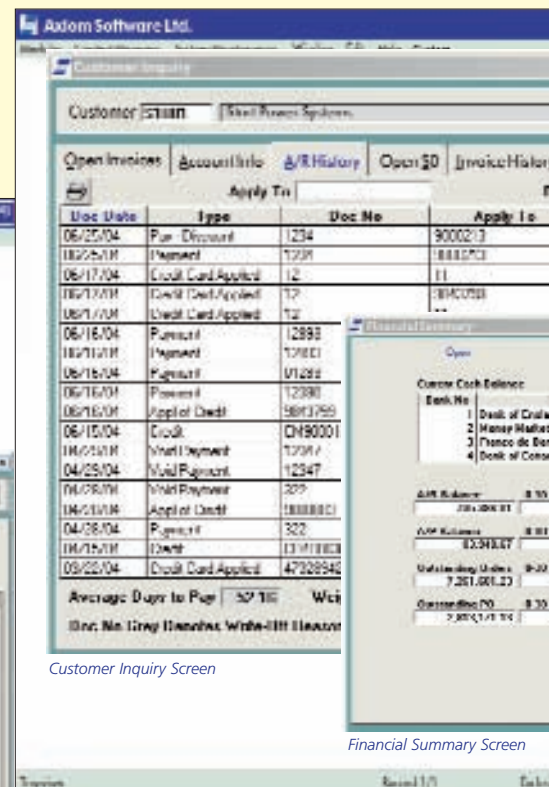

EPDS allows you to look in one place and view or print out all the key statistics and indicators you need to run your business.

Financial Summary Screen

EPDS allows you to easily attach external information from Word documents, Excel spreadsheets, diagrams and certifications, or any file for quick referencing. This reduces wasted time digging through file drawers and archived e-mails, and brings you one step closer to a paperless environment.

Know more about your customers

With EPDS, customer inquiries that were once difficult to respond to, can be answered instantly.

disbursements and more in one easy-to-see format. When required, you can drill down and see more!

EPDS allows you to project your cash position by providing an easy-to-use and easy-to-understand 16-week cash forecast. Based upon open accounts receivables and payables, historical payment patterns, open sales orders and purchase orders, and your current cash position the forecast shows a week-by-week forecast of cash that will allow you to identify any upcoming shortfalls that you need to plan for.

You can instantly see your cash position across all bank accounts, A/R and A/P balances aged out, as well as outstanding sales, purchase orders and inventory. You can also see bookings, sales, credits, book-to-bill ratios, cash receipts and

Software designed specifically for the distribution industry.

Place purchase orders more quickly

EPDS makes it easier than ever to manage procurement for both stock replenishment and to fulfill unsupported orders.

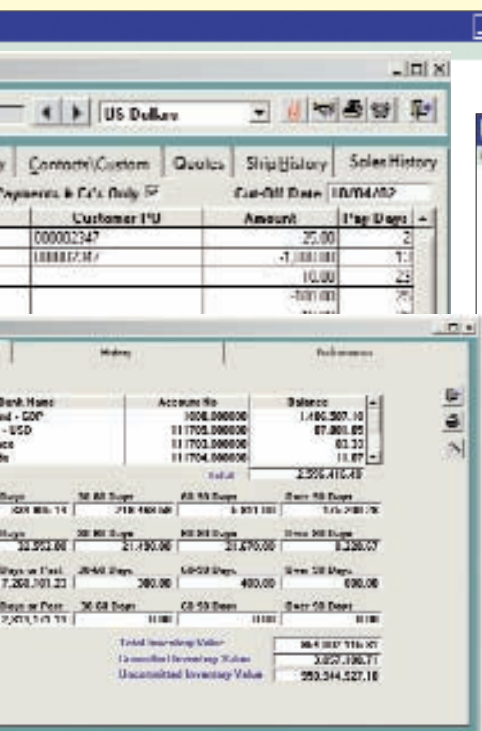

Purchase orders can always be entered manually, however, EPDS provides the ability for you to easily generate error-free purchase orders which can be printed, faxed, or e-mailed directly to your vendors.

For replenishment of stock, the Purchasing Advice Report or Purchase Generator suggests what to buy and

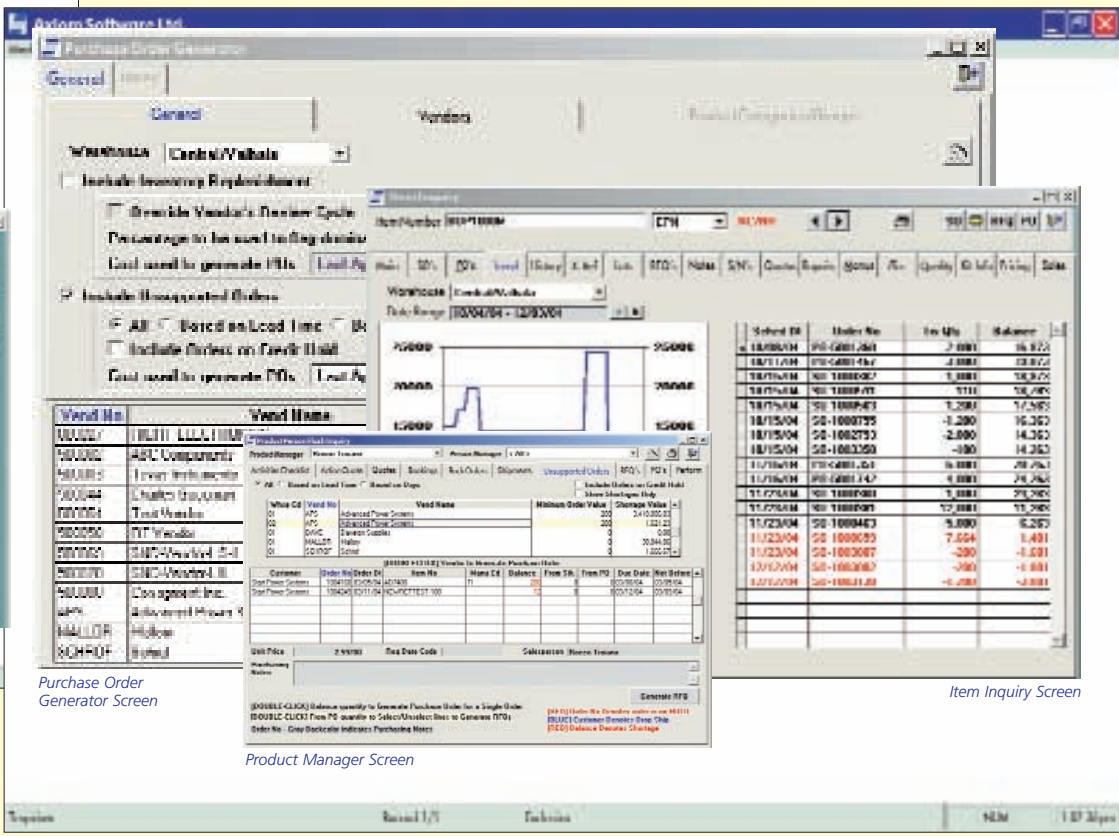

into your system to access information that you want them to have. They can view, in real-time, such data as open and closed sales orders, shipments, and quotes and inquire about your inventory position. In addition, they can enter into a 'shopping cart', their requirements for parts that will automatically and instantly appear in EPDS as an open quote.

Purchase Order Generator Screen

Item Inquiry Screen

how many, based upon past usage, item classification, lead time, and safety level.

For sales orders that need product, EPDS presents an on-screen list of unsupported orders. With a mouse click or two, you can generate the purchase orders that are needed to support these orders. The system even allocates the parts from the purchase order to the sales orders that need them.

Offer more value to your customers

With the addition of EPDS.Web, a standalone web solution that integrates seamlessly with EPDS, your customers can safely log
