Quickly read, gather, aggregate and summarize real-time and historic data from multiple sources.

- **Increase Profitability, Advanced Levels Of Control For Small And Midsize Businesses –**

Improve visibility into financial processes and overall performance allowing you to stay on top of your business and grow profitability.

Tailored For Your Industry

To capture market share, businesses need to sense changing market and customer requirements in real-time, and acquire the operational ability to respond to these more quickly than their competitors.

Emergys, in partnership with SAP, has developed a pre-configured SAP® solution for the Chemicals industry called **Chemical 360°**. With **Chemical 360°** you can respond swiftly to customer requirements in real-time and strategically learn and adapt to market insights by extending processes beyond the enterprise to include your entire business ecosystem. Built on open technology, it enables small to midsize companies to optimize core business processes in areas like Analytics, Human Capital Management, Financials and Operations. Customers benefit from improved productivity, increased insight, plus advanced flexibility and adaptability in accelerating business strategies.

- Profitability analysis

Call to Action:

If you are one of the many Chemical Manufacturers who are relying on either a manual system, a system that is a mix of manual and spreadsheets or an ERP system that has been installed for a number of years, this is your opportunity to see what SAP can do to improve your business.

"60% of all SAP installations are in companies with less than \$500 million in revenues"
